

Automation Industry

“...I would highly recommend this valve for use by any of our customers...”

Mr. Bob Rodgers
General Manager
Worksmart Systems, Inc.

FOOT PEDAL VALVE

Company: Worksmart Systems, Inc.
Peabody, Massachusetts

Product: Foot Pedal Valve

Application:

Worksmart Systems specializes in the design and development of products that increase production and improve ergonomics. They have improved the idea of a standard assembly workbench and assembly line, by incorporating the two into modular work cells. These work cells help maximize productivity and flexibility, while reducing waste, handling, and worker injuries.

Testimonial:

“...we have been using the (Hoerbiger-Origa) foot valves on our products for over 6 years. We use 50-100 valves annually and have them installed throughout the world. To date, we have had only one failure of the plastic housing. This was due to (the valve) being hit by a fork truck. The bottom ear, where the pads mount, broke off. However, the valve was still operational and is still in service. One of the reasons we chose this valve was because of the plastic housing. We feel the metal ones can be dented, preventing the operator from being able to place their foot into the guard as well as trapping the operators' foot in the valve, if it was dented while in use. The purpose of the guard, for our application, is to prevent inadvertent actuation of the valve...”
